

Small Scrubber HEPA KH-10 Type

KH-Series/KH-10Type

Not to mention a bad smell, poisonous gases, mine dust measures, the white smoke removal can help it, too

New!

A chemical exhaust fan,
an active carbon are with hepa filter

Standard lineup

KH-3Type (3m³/min)

KH-10Type (10m³/min)

KH-20Type (20m³/min)

There is the product made
in polypropylene, too

I send clean air

■Performance explanation

○ The corrosion-resistant fan deployment

Because it is corrosion-resistant,
I am equivalent to every gas

Exhauster (FRV)STT-150
200V × 400W × 10m³/min × 600Pa
There is the high static pressure type, too

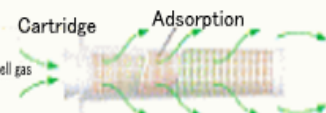

Clean, safe air

○ The mine dust removal HEPA Filter

I catch a pollution particle by power of
HEPA strongly More than 99% of efficiency

○ Bad smell, poisonous gases adsorption tank (active carbon filter)

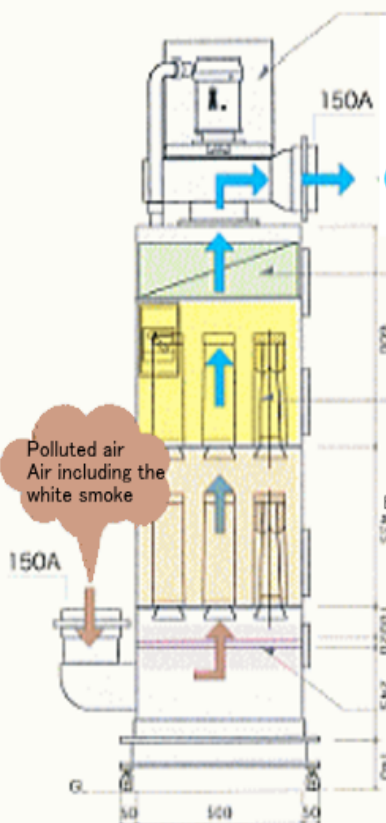

I adsorb it by the power of the active carbon well

Because deoxidation-related gas, the de-alkaline gas
can prepare unless they are for neutral gas,
I am equivalent to every solvent system gas

○ Collection of assistant of garbage, the dirt (pre-filter)

At first relatively big garbage, impurity is caught

Small Scrubber HEPA

KH-10 Type

Size : 500 × 500 × 2040mm

Materials : Hard vinyl chloride board 5t Ivory

Processing-like quantity : 10m³/min

Static pressure in the plane : 250 Pa

Chemical fan : 400W/200V 1

Active carbon : UC-10 Two steps

Pre-filter : 480 × 480 × 20t Two pieces

hepa-filter : 450 × 480 × 75t One pieces
